

Lesson 14 - Files

14.01 Write a program that calculates the mean of a list of numbers stored in a text file.

14.02 Write a program that given three filenames reads the contents of the first two files and writes to the third file.

Fiche1	Fiche2	Fiche3
5	30	5
100	10	100
	7	30
		10
		7

14.03 Consider two sequential access files each having a list of values stored. Write a program that builds a third sequential access file containing the average of the pair of values in the same line of the two files. If the two files do not have the same number of lines the missing values should be considered zero. (Note: you should not use arrays)

Fiche1	Fiche2	Fiche
20	100	60
40	10	25
	80	40
